

eXimoSIO®

Integrated Operations System
Manage operations, tools, and contracts from
a single smart platform

eSIO® is a comprehensive software solution designed specifically for oilfield service companies. With a modular approach, it enables efficient management of service requests, tool tracking, customer contracts, and field operations at well sites.

Key Features:

Service and rental request management: Create and manage requests by service type (fishing, drilling, plug & packer, etc.) or tool rental.

Tool tracking: Monitor the exact location of each tool, including inter-base or rig transfers through generated dispatch notes.

Complementary tool management: Handle the auxiliary tools needed for the operation of main equipment.

NDT inspection control (IND): Log non-destructive testing records with validity periods and results. Receive automatic alerts before expiration.

Field report logging: Record detailed job reports including tasks performed at the well site, personnel involved, and tools used (BHA).

Contract and addendum management: Link each request to customer contracts, including position values and any contractual updates.

Analytics & Reporting:

Production per operational center

Contract and debt tracking

Tool movement and inventory

Pending tool returns

IND (NDT) expiration monitoring

Lost-in-hole tracking (client vs. company responsibility)

Smart Alerts:

eSIO® includes an automated email notification system that keeps your team informed about:

- Operational updates
- New service requests
- Contract expirations
- Expired inspection alerts
- Tools pending return to stock

Security & Traceability:

User authentication via credentials ensures a secure environment. Every action is recorded and each user operates under a predefined role-based access profile, ensuring clear traceability and control.

eSIO® is the ideal tool for companies seeking greater control, efficiency, and traceability in field operations.
