SOFTWARE DEVELOPMENT

eXimoDrill®

Optimize oil well operations with a comprehensive and specialized solution

eXimoDrill® is a software tool designed specifically for rig companies in the oil and gas sector. It enables efficient, centralized management of well operations, facilitating informed decision-making based on accurate, real-time data.

Key Features:

Balanced Scorecard (BSC): Visualize key performance indicators across financial, operational, quality, and economic areas for full company monitoring.

Registro remoto de operaciones: Capture field activity data directly from the site for accurate and up-to-date records.

Contract and rate integration: Link operational activities with client contracts and applicable rates to automate service certification and billing.

Consumables control: Monitor the use of critical resources such as fuel and water, helping optimize consumption and reduce costs.

Human resources management: Track shift attendance, crew roles, and incident statistics to enhance safety and operational efficiency.
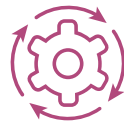

Data analysis and reports: Generate detailed reports on well maneuvers, pump hours, solids control, and more for continuous improvement.

Benefits:

Informed decision-making in real time

Increased operational efficiency and automation

Customizable to each project or company need

Compliance with industry safety standards

Applications in industry:

eXimoDrill® is trusted by leading Oil & Gas companies across Argentina and internationally.
